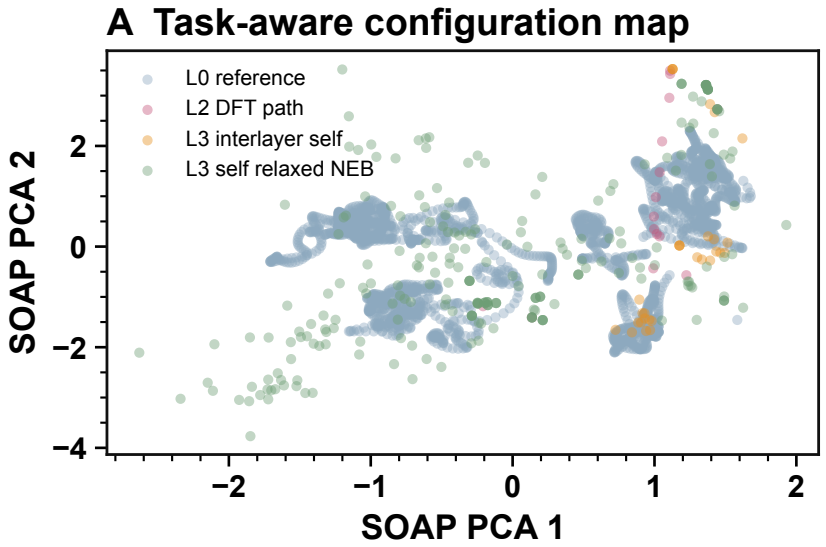

Figure 8 | Where new QE data may be needed (conditional)

BLOCKED

No verified geometry_id-resolved join between descriptor distance and the Figure 3–4 QE error table.
Do not substitute PCA distance for error.

BLOCKED

High-error image threshold and prospective held-out path are not frozen with a common geometry key.
No recognition rate is reported.

BLOCKED

Seed disagreement and measured error cannot be paired from current artifacts without a validated join.
Keep as a supplemental map only.

Only panel A is supported by the current descriptor manifest; panels B–D are explicit placeholders, not conclusions.
